M. Tech. 1st Sem. (Mech. Engg.)

(Machine Design)

Examination – December, 2014

MECHATRONICS AND PRODUCT DESIGN

Paper : M-809-A

Time : Three hours]

[Maximum Marks : 100

Before answering the questions, candidates should ensure that they have been supplied the correct and complete question paper. No complaint in this regard, will be entertained after examination.

Note : Attempt any *five* questions. All questions carry equal marks.

1. (a) Explain the various stages in mechatronics design approach and how it differs from the traditional approach. 10
- (b) Devise an automatic washing machine explaining the various Mechatronics elements used in the design. 10
2. (a) With a neat diagram, describe the working of a solenoid. 10
- (b) Discuss the working of a roller and thrust bearing with suitable diagrams. 10

3. (a) Discuss the static and dynamic characteristics of sensors. 10
- (b) What is RTD ? Briefly explain the relationship between resistance and temperature for the RTD with temperature resistance curve. 10
4. Suggest a sensor whose output is an electrical signal for the following and explain them in detail.
- (a) Vacuum pressure measurement in the range of 10^{-2} to 10^{-6} torr.
- (b) Velocity of hot gas in a conduit. 20
5. (a) Explain electronic proportional derivative(PD) controller with necessary circuit diagrams. 10
- (b) Draw the circuit of a counter type A/D converter and explain its operation. 10
6. A feedback control system has transfer function of $G(s) = \frac{s^2 + 3s + 2}{s(s^2 + 7s + 12)}$. Derive two different state models for the system. giving the state-equations for each model. 20

7. Explain the model building using the basic building blocks for a
- (a) Automobile suspension system
 - (b) Electrical motor 20
8. (a) Write short notes on encoders and decoders. 5
- (b) Explain the Mechatronics systems used in an automatic car parking with a neat block diagram. 15
-
